DEVOPS ENGINEER | AWS CLOUD ENGINEER

PROFESSIONAL SUMMARY

DevOps and AWS Cloud Engineer with 5+ years of experience building, automating, migrating, and supporting production cloud infrastructure. Strong expertise in Infrastructure as Code using Terraform, AWS CloudFormation, and AWS CDK, CI/CD automation using Jenkins, GitHub Actions, and GitLab CI; and container platforms using Docker and Kubernetes/Amazon EKS. Proven experience in enterprise Azure-to-AWS migration, incident management, root cause analysis, multi-account governance, production troubleshooting, and cloud modernization. Recognized AWS CloudFormation SME with experience resolving 1,200+ incidents, supporting 150+ enterprise migrations, and collaborating with AWS engineering teams. Hands-on exposure to GenAI, MCP, specialized agents, and AI-assisted DevOps automation.

TECHNICAL SKILLS

- **Cloud**: AWS, Azure, EC2, VPC, S3, IAM, RDS, ECS, EKS, Lambda, Auto Scaling, Elastic Load Balancing, CloudWatch, ECR
- **Infrastructure as Code:** Terraform, AWS CloudFormation, AWS CDK, AWS Control Tower, AWS Service Catalog, YAML
- **CI/CD & DevOps:** Jenkins, GitHub Actions, GitLab CI/CD, AWS CodePipeline, CodeBuild, CodeDeploy, Git, JFrog Artifactory, SonarQube
- **Containers:** Docker, Kubernetes, Amazon EKS, Amazon ECR, Helm
- **Automation:** Python, Bash, Groovy, Ansible, AWS CLI
- **Monitoring & Reliability:** Prometheus, Grafana, CloudWatch, Incident Management, RCA, Observability, Production Support
- **Migration & Security:** Azure-to-AWS Migration, AWS Application Migration Service, Network/Firewall Analysis, East-West Connectivity, IAM, KMS, Multi-Account Governance
- **AI & GenAI:** Model Context Protocol (MCP), AI Agents, Agentic Workflows, Prompt Engineering, GitHub Copilot, Kiro, GenAI-assisted Development, AWS Bedrock, RAG, Langchain
- **Operating Systems:** Linux, Red Hat, Ubuntu, Windows

PROFESSIONAL EXPERIENCE

EPAM Systems | Senior Systems Engineer (DevOps / Cloud Migration) **Apr 2026 – Present**

Project: Enterprise Azure-to-AWS Migration & AI-Driven CI/CD Modernization

- **Designed** East-West and Firewall-19 rules for enterprise Azure-to-AWS migrations by analyzing application communication flows, source/destination IPs, subnet CIDRs, ports, protocols, and connectivity dependencies.
- **Created** migration architecture and delivery documentation covering Solution Impact Gateway (SIG), target architecture, migration methodology, implementation phases, validation, cutover, and hypercare.
- **Architected** an AI-driven CI/CD migration platform using Model Context Protocol (MCP), specialized agents, and tool-based workflows to analyze Jenkins pipelines and automate migration to GitHub Actions and GitLab CI.
- **Developed** agentic pipeline-analysis workflows that inspect JenkinsFiles, stages, dependencies, parameters, environment variables, runtime requirements, and execution semantics before generating target CI/CD configurations.
- **Designed** agent-driven validation and remediation workflows to identify blockers involving runtime capabilities, container dependencies, Docker/AWS CLI requirements, and pipeline semantic mismatches before code commits or merge requests.
- **Finalized RAG** pipeline with similarity search to retrieve relevant SIG data for AI driven migration activities.
- **Implemented Amazon Bedrock** Knowledge Bases and Guardrails to allow for secure context aware GenAI operations.

Amazon Web Services (AWS) | Cloud Engineer I – DevOps / Deployment **Jan 2024 – Apr 2026**

Project: Enterprise AWS Infrastructure Support, IaC & Cloud Operations

- **Managed** 1,200+ technical incidents and led recovery from 100+ high-severity production outages across AWS services for enterprise and Fortune 500 customers.
- **Resolved** 80+ complex escalations across AWS CloudFormation, AWS CDK, and AWS Control Tower while troubleshooting deployment and upgrade failures across ECS, EKS, Auto Scaling, Lambda, EC2, and RDS.
- **Served** as an Infrastructure as Code (IaC) expert within the AWS technical community, guiding enterprise customers

toward highly available, secure, and scalable AWS architectures.

- **Collaborated** with 15+ AWS development teams to reproduce and resolve infrastructure issues and unblock failing ECS and Lambda deployments through CloudFormation.
- **Guided** enterprise customers in implementing multi-environment, cross-account CI/CD pipelines using IaC for containerized ECS/EKS and serverless Lambda workloads.
- **Mentored** 4 engineers toward AWS CloudFormation SME status, strengthening team-level expertise in Infrastructure as Code troubleshooting and also served as an on-call engineer for critical production incidents leading real time troubleshooting and root cause analysis.
- **Authored** and peer-reviewed 5 internal troubleshooting documents that improved support engineers' ability to diagnose recurring AWS infrastructure issues.
- **Drove** AWS Control Tower adoption for multi-account governance and service catalog standards, supporting 150+ enterprise migrations.
- **Assisted** enterprise customers with application and infrastructure migrations from on-premises and legacy environments to AWS using CloudFormation, CDK and Terraform.

Western Digital | DevOps Engineer **Dec 2021 – Jun 2023**

Project: NVMe Firmware Validation & Cloud-Native DevOps Platform

- Implemented CI/CD pipelines using Jenkins and Git to automate NVMe firmware build and validation workflows and improve release cycle time.
- Automated AWS infrastructure provisioning and environment configuration using Terraform and Infrastructure as Code practices.
- Containerized microservices using Docker and Amazon ECR and deployed workloads on Kubernetes clusters in Amazon EKS.
- Pioneered Kubernetes adoption for containerized workloads, achieving 20% infrastructure cost efficiency.
- Developed Python automation scripts that reduced manual operational effort by 75% over 12 months.
- Implemented monitoring solutions using Prometheus and Grafana to provide real-time visibility into application and infrastructure health.
- Integrated Git-based version control practices to improve collaboration, traceability, and release management.
- Supported automated testing and static code analysis workflows using unit, integration, performance testing, and SonarQube.

Amazon | ML Data Associate **Aug 2019 – Mar 2021**

Project: Serverless Snapshot Optimization & AWS ML Platform Support

- Designed EC2 infrastructure architecture with a focus on high availability and security requirements.
- Developed and deployed Snapshot Optimize, a Python-based AWS Lambda solution for snapshot management and operational efficiency.
- Supported machine learning teams with application build and deployment activities and gained hands-on experience with Amazon SageMaker.
- Worked with AWS EC2, S3, Auto Scaling, AWS CLI, CloudFormation templates, and JFrog Artifactory.
- Led knowledge-sharing sessions that improved team productivity and contributed to a 20% reduction in post-release defects.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate — May 2024
- AWS Certified AI Practitioner — Nov 2024
- Hashi Corp Certified: Terraform Associate (003) — July 2025
- Claude Certified Architect – Foundations — June 2026

EDUCATION

- Bachelor of Engineering | Sathyabama University

CORE STRENGTHS

- Infrastructure as Code • AWS Cloud Operations • DevOps Automation • CI/CD • Cloud Migration • Kubernetes • Incident Management • Root Cause Analysis • Platform Engineering • Production Troubleshooting • Multi-Account Governance • Agentic AI • GenAI-Assisted Engineering
